polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-E1
library is a subtracted library derived from the UI-R-E0
library is a subtracted library consisted of a mixture of
individually tagged normalized libraries constructed from
8, 12 and 18-day embryo. The tag is a string of 3-5
nucleotides present between the Not I site and the
oligo-GT track which allows identification of the library
of origin of a clone within the mixture. The subtracted
library (UI-R-E1) was constructed as follows: PCR
amplified cDNA inserts from a pool of UI-R-E0 clones from
which 3' ESTs had been derived was used as a driver in a
hybridization with the UI-R-E0 library in the form of
single-stranded circles. The remaining single-stranded
circles (subtracted library) was purified by
hydroxyapatite column chromatography, converted to
double-stranded circles and electroporated into DH10B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (bases 1 to 431)
                                                                                                                                         134
                                                                                                                                                                                                                                                                                                                                             of origin of a clone within the mixture. The subtracted library (UI-R-EI) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-EO clones from which 3′ ESTs had been derived was used as a driver in a hybridization with the UI-R-EO library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DHIOB bacteria (Life Technologies) to generate the UI-R-EI library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                individually tagged normalized libraries constructed from 8, 12 and 18 day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-off track which allows identification of the library of origin of a clone within the mixture. The subtracted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /organism="Rattus norvegicus"

Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a smale
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Wilson,R., Ainscough,R., Anderson,K., Baynes,C., Berks,M., Bonfield,J., Burton,J., Connell,M., Copsey,J., Cooper,J., Coulson,A., Craxton,M., Dear,S., Du,Z., Durbin,R., Favello,A., Fulton,L., Gardner,A., Green,P., Hawkins,T., Hillier,L., Jier,M., Johnston,L., Jones,M., Kershaw,J., Kirsten,J., Laister,M., Latreille,P., Lightning,J., Lloyd,C., McMurray,A., Mortimore,B., O'Callaghan,M., Parsons,J., Percy,C., Rifken,L., Roopra,A., Saunders,D., Shownkeen,R., Smaldon,N., Smith,A., Sonnhammer,E., Staden,R., Sulston,J., Thierry-Migy,J., Thomas,K., Vaudin,M., Vaudhan,M., Watchen, R., Sulston,J., Thierry-Migy,J., Thomas,K., Vaudin,M., Vaudhan,M., Watchen,M., Smith,A., Sonnhammer,E., Vaudhan,M., Watchen,M., Smith,A., Sonnhammer,E., Vaudhan,M., Watchen,M., Smith,A., Sonnhammer,E., Vaudhan,M., Watchen,M., Smith,A., Vaudin,M., Vaudhan,M., Watchen,M., Watchen,M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Coding sequences below are predicted from computer analysis, predictions from Genefinder (P. Green, U. Washington), and of available information.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone CO1F6.

It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaughan, K., Waterston, R., Watson, A., Weinstock, L., Wilkinson-Sproat, J. and Wohldman, P.

The H. influenzae sequence has been updated by R. Fleischmann. New database matches have been assigned, product names have been improved, and a number of frame shifts have been corrected. We gratefully acknowledge the work of Tatusov et. al. We have incorporated their annotation into the /notes fields of the

                                                                                                                                                                                                wore than 870,477 bases have been sequenced by the genomic walking technique and assembled into 372 non-overlapping contigs (Accession numbers Z33005 to Z33376) covering 214,528 base pairs. The length of the contigs varies from 63 base pairs to 2049 base pairs with an average length of 658 base pairs. The data consists of 13,091 bases (64%) from one pass fluorescent sequencing and 201,437 bases (94%) produced by genomic walking. Of the latter, 155,805 bases (77%) have multiple coverage on at least one strand and 112,621 bases (56%) are covered on both strands. There is a total of 968 ambiguous nucleotide assignments in the data set (0.5%). We have compared 8,868 bases of our data with Mycoplasma capricolum sequences already stored in the public databases and note less than 0.7% difference between the two data sets (1 including ambiguous calls, insertions, deletions and mismatches).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The tga codon is read as Tryptophan in Mycoplasma capricolum Coding sequences below were putatively identified by Peer Bork using the program Genequiz at the EMBL.

2.2 Mb of contiguous nucleotide sequence from chromosome III of C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bin/display?db-wormace&class=Sequence &object=K08H2
Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a smale
                                                                                                                                                                                                                                                                                                                                                                                                                                 once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone K08H2 is at 1 in this sequence. The true right end of clone K08H2 is at 7075 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone K08H2.

It may be shorter because we only sequence overlapping sections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Coding sequences below are predicted from predictions from Genefinder (P. Green, U. available information.
